

A SHORT-RANGE COUNTER-DRONE SOLUTION

GGG 5.56 & 7.62 Multi-Projectile Ammunition

GGG

GIRAITĖS GINKLUOTĖS GAMYKLA
PASSION. PERFORMANCE. PRECISION.

Drawing on operational insights and experience from Ukraine, this specialized ammunition is designed for use with most standard 5.56 NATO rifles.

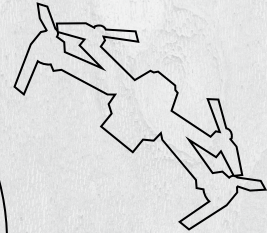

Designed as a last line of defense, it provides an effective solution against small to medium-sized attack drones at close range.

ANTI-DRONE CARTRIDGES

5.56 x 45mm

7.62 x 51mm

CARTRIDGE PARAMETERS

CALIBER	7.62/.308 WIN ANTI-DRONE	5.56/.223 REM ANTI-DRONE
Chamber pressure meets C.I.P requirements	Most effective range: up to 150 m	Most effective range: up to 100 m
Initial velocity, m/s	820	900
Maximum horizontal range, m	450	350
Maximum vertical range, m	300	250
Most effective range, m	150	100
Dispersion at 50 m, (cm)	~100	~150

OPERATIONAL CONCEPT

Each soldier or critical infrastructure security unit is equipped with a dedicated magazine loaded with GGG multi-projectile ammunition.

In the event of a drone threat, the operator rapidly switches to this magazine and engages the target at close range.

The multi-projectile effect increases hit probability against fast-moving drones, enabling an effective and immediate response in critical situations.
